## WHY CHOOSE OUR DEXA SCAN?

The Dual-Energy X-Ray Absorptiometry (DEXA) Scan is the gold standard for accurately measuring body fat percentage, lean muscle mass, and bone density. Unlike basic scales or BMI, it gives a detailed breakdown by region and tissue type, helping you understand your body composition on a deeper level.

## WHAT YOU GET

- Total body fat percentage and lean mass results.
- Regional breakdowns (arms, legs, trunk, and visceral fat insights).
- Bone mineral density measurement (optional).
- Personalized report and consultation summary.

**At Artesia General Hospital, our advanced imaging services include X-ray, CT, MRI, ultrasound, and mammography to support your health.**
